Enjoy the best of portability with the new wireless technology and sleek design.

The 1800PVS series is used for visualizing areas where the human eye cannot see. This product uses a mini CCD (Charged Coupled Device). The PVS series has 4 way articulation. There are many great features that come standard with the new PVS. Our new optical system has high resolving power and sensitivity which makes for a good quality image and is adjustable through the user friendly operating system. The light-weight wireless design makes it very easy to handle and clean with its new water proof design.
